Building a Connected Data Foundation for Arts-based Experiences

A screenshot of a Microsoft Access table window. The window title is "Microsoft Access - [Table1 : Table]". The menu bar includes File, Edit, View, Insert, Format, Records, Tools, Window, and Help. Below the menu is a search bar with the text "Type a question for help". The main area is a grid with 8 columns labeled Field1 through Field8 and approximately 20 empty rows. A small asterisk is visible in the bottom-left corner of the grid.

Imagine seeing connections of experiences (and outcomes) across students, teachers and artist communities.

2018 – 2025: Arts Integration Meets Connected Data

Short-term – 2018 -2020

- ❑ Map out opportunities & challenges
- ❑ What experience data could we create, capture and connect?
(e.g. appropriate; actionable)
- ❑ Engage with existing efforts

Long-Term – Beyond 2020

- ❑ Overcome Challenges
(e.g. blockchain used for privacy)
- ❑ Align schools and community-based arts institutions with social policy & technology capability?

Habit: Seeking Signals of Change

A signal is a small or early step innovation, disruption or constraint that could grow into something larger across society, business or government.

Signals

A signal can be a news event, a new service, product, technology, policy, social movement, or conversation stream on Twitter!

Signals grab our attention but can also be easily dismissed as noise.

I Found Story on Recent Gathering

The screenshot shows the Neo4j website header with navigation links: PRODUCTS, SOLUTIONS, PARTNERS, CUSTOMERS, LEARN, DEVELOPERS, and a search bar. The main content area features a blue banner with the text 'Neo4j Blog' and 'Neo4j Life Sciences & Healthcare Workshop – Proceedings from Berlin'. Below the banner, there are two article teasers. The first is 'Big Data in Genomics: How Neo4j enables personalized therapies' by Martin Preusse (Knowing, Helmholtz Zentrum Munich), accompanied by a portrait of Martin Preusse. The second is 'Prioritizing SNPs using the Neo4j Galaxy Interactive Environment' by Thoba Lose (South African National Bioinformatics Institute), accompanied by a portrait of Thoba Lose. The text of the first article states: 'Biomedical research generates vast amounts of data. New experimental technologies like DNA sequencing, metabolomics and proteomics drive the fast growth of available information and lead to a better understanding of the molecular organization of life.'

Often invisible to the people outside of the field, life science researchers have been quietly embracing **graph databases** instead of the traditional triple and relational stores.

On June 21, we invited a group of life science and healthcare researchers and practitioners to share their experiences in a full-day workshop.
